

Here is code $2x^{34}$, Also we have $3x^{3x^5+8}$.
 Now talking about subscript we do as

$$5w_5 + 5w_{76} + 8w_{58}$$

For typing series

$$a_1, a_1, a_3, \dots, a_{100}$$

Greek letters

$$\pi$$

$$\Pi$$

$$\alpha$$

$$A = \pi r^2$$

trigonometry Functions:

$$y = \sin x$$

$$y = \csc \theta$$

$$y = \sin^{-1} x$$

Log Functions:

$$y = \log_6 x$$

$$y = \ln x$$

square root =

$$\sqrt{2}$$

$$\sqrt[4]{17}$$

$$\sqrt{x^2 + y^2}$$

Fractions: $y = \frac{7}{89}$

Fractions: $y = \frac{7}{89}$

A complex equation:

$$\frac{\sqrt{x-1}}{\sqrt{x+1}}$$
