

The distributive property states that  $a(b + c) = ab + bc + ac$ , for all  $a, b, c, \in \mathbb{R}$

$A$  can accept  $[1, 2, 3]$  but not  $1, 2, 3$  so we do  $\{1, 2, 3\}$

It does not accepts \$. So we put a slash before.

$$2(\frac{1}{x^2-1})$$

. So we do:

$$2\left(\frac{1}{x^2-1}\right)$$

$$2\left[\frac{1}{x^2-1}\right]$$

$$2\left\{\frac{1}{x^2-1}\right\}$$

$$2\left|\frac{1}{x^2-1}\right|$$

$$\left.\frac{dy}{dx}\right|_{x=1}$$

Tables:

|        |    |    |    |    |    |
|--------|----|----|----|----|----|
| $x$    | 1  | 2  | 3  | 4  | 5  |
| $f(x)$ | 10 | 20 | 30 | 40 | 50 |

|        |     |     |     |     |     |
|--------|-----|-----|-----|-----|-----|
| $x$    | 11  | 22  | 33  | 44  | 55  |
| $f(x)$ | 110 | 220 | 330 | 440 | 550 |

Table 1: This is caption of the data

Arrays:

$$5x^2 + 3 = 0 \text{ This is text} \tag{1}$$

$$a + 3 = b^2 - 3d \tag{2}$$

$$d^2 - d - 5 = 0 \tag{3}$$
